

Presenter reviewer: Juval's and Lucia's

For Ivan, before and during the meeting. Read it once tonight, skim the questions tomorrow morning, and keep it open on your phone. Numbers carry their source at the end.

The one sentence to remember: "You already have the food and the place. We connect everything around it, so more people find you, more of them come back, and you can see the whole business from your phone."

1. Before you go

Bring

- Laptop with the deck (`juvals/pitch/index.html` , works offline) or the PowerPoint file. Charger. HDMI adapter if they have a TV.
- Your phone with the live website open: <https://ivnautomation.xyz/juvals/>
- The Mogoba POS demo on a tablet or laptop (sample data, Owner PIN 1234) so they can tap a real order, a kitchen ticket and the stock screen.
- One printed copy of the client PDF to leave behind.
- A pen and a notebook: write down their answers to the discovery questions in section 3.

Check the morning of the meeting

- The website loads on mobile data, not just Wi-Fi.
- The menu prices on the site still match their printed menu (ask them if anything changed).
- Your Google search for "restaurant Camalaniugan" and "Juval's" so you know where they appear today.
- Their current Google rating and review count (it was 4.1 from 27 when we wrote the deck).

Mindset

- This is a conversation, not a lecture. Aim for 20 to 25 minutes of slides, then let them talk.
- Ask before you tell. Their answers decide which package fits.
- Never promise rankings, a number of customers, or BIR accreditation dates.
- Prices: only if they ask, and say they are starting points. Do not put them in writing yet unless they request a quotation.

2. Meeting plan (about 45 minutes)

TIME	WHAT	GOAL
0 to 5 min	Thank them, small talk about the garden and the food	Warmth. Let them speak first.
5 to 10	Discovery questions (section 3)	Learn their pain before showing the plan
10 to 30	Deck, slides 1 to 16	Show the vision, one module at a time

TIME	WHAT	GOAL
30 to 40	Questions	Use section 5
40 to 45	Next step and date	Agree on the first step, not on everything

If time is short, show slides 1, 2, 4, 6, 8, 10, 15, 16 and 20 only.

3. Discovery questions to ask them first

Write the answers down; they shape the offer.

1. How many guests do you serve on a normal weekday, and on a busy Sunday?
2. Where do most new guests come from today: Facebook, people passing on the highway, word of mouth?
3. How do you take orders now: paper, a register, a POS app? Who counts the money at night?
4. How do you track stock and know when pork, chicken or milk is running low?
5. How many staff, and how do you record their time in and time out today?
6. Do you get bilao, catering and event inquiries every week? How do you track them?
7. Who handles your Facebook page and Google profile today?
8. Tell me about Lucia's. Is it a separate place, a separate brand, or both?
9. If you could fix one thing in the business this year, what would it be?

Listen for the biggest pain and lead with the matching module.

4. Slide by slide

1. Cover. "Thank you for making time. This is a plan for Juval's and Lucia's. It is a vision, not a contract. We will start small."

2. What you already have. Compliment specifics: the garden, the three kitchens, the batil patong. "People already drive here for this. What is missing is the system around it."

3. Website is live. Open it on your phone and hand it to them. Show the menu search, the open-now status, Reserve sending to Messenger. "We built this before asking for anything."

4. Where guests slip away. Walk the road left to right. Point at one red box that matches what they told you in discovery.

5. The numbers. Pick one number to stress: the **31%**. "In one year, the share of people who only pick places rated 4.5 or more almost doubled, from 17% to 31%. At 4.1, Juval's is skipped by them before they ever see the food." If they mention Foodpanda, use the **1 in 4** instead: "On a ₱1,000 bilao, an app keeps ₱200 to ₱330. Your own QR costs about ₱10." Say once that the review studies are from the US, so they show direction, not a promise.

6. Hapag. "Hapag means the dining table. Everything sits at the same table: every guest, order, peso and hour worked." Explain the three colours: bring guests in, run the restaurant, bring them back.

7. Ordering. "Guests order from all three kitchens in one cart and pay by GCash or Maya. No commission to an app." Show the same flow in the

Mogoba demo we built for Aparri.

8. Reviews and NFC. Hold up a phone and mime the tap. "Every table, every server. It opens your Google review page. We ask every guest, we never pay for reviews, we never hide the unhappy ones. That keeps Google happy."

9. Ads. "Ads only reach people within a short drive: Aparri, Lal-lo, Buguey, Gonzaga. The ad opens a Messenger chat to reserve or order a bilao."

10. POS. "One bill, three kitchen tickets, three clear reports." This is often the moment owners lean in. Offer the tablet demo here.

11. Stock. "Every sale deducts its recipe. You see food cost per kitchen, and what is about to expire."

12. Staff time. "Enter a PIN, a photo is taken, the time is recorded, overtime and night and holiday rates are worked out. You or your bookkeeper approve the payroll."

13. Loyalty and events. "No app for the guest. Their mobile number is the stamp card."

14. Owner dashboard. "This is what you would open every night, for Juval's and Lucia's."

15. Flywheel. "Separate apps never talk to each other. Here, each part feeds the next."

16. Roadmap. "We do not switch everything on at once. First two weeks: Google profile, review stands, your own domain and the Undas ads. By January: the events board, the stamp card, and the staff clock before the December payroll. The POS comes after that, one kitchen at a time, once the staff are used to the first steps."

- 17. Packages (presenter only, not in the PDF).** Show only if they ask about price. In the PowerPoint this slide is hidden in the slideshow; if they ask, type 17 and press Enter to jump to it.
- 18. Targets.** "These are our targets, not promises. We agree today's numbers together in week one and report every month."
- 19. Why us.** Short. Local, already built, works offline, your data stays yours.
- 20. Next steps.** Ask for a date to start the first two weeks.

5. Questions they will likely ask, with answers

Cost and commitment

How much is this? Three starting points (slide 17, presenter copy only):

PACKAGE	MONTHLY	SETUP	WHAT IT COVERS
Tanaw	₱5,000	₱10,000	Own domain and faster site, Google profile care, review stands and NFC cards, a reply to every review, 8 posts a month, monthly report
Suki (most pick this)	₱9,000	₱30,000	Tanaw plus stamp card and birthdays, feedback with owner alerts, events board with deposits, Messenger ads and a monthly scorecard

PACKAGE	MONTHLY	SETUP	WHAT IT COVERS
Hapag Buo	₱14,000	₱60,000	Suki plus the POS for three kitchens, stock and food cost, time clock and payroll prep, owner dashboard and 8 AM message

Hardware for Hapag Buo is at cost, about ₱35,000 to ₱60,000 (tablet ₱7,990, kitchen printers, cash drawer, small UPS). Lucia's adds ₱1,000 a month per terminal. Moving up a package credits the setup already paid. BIR accreditation of the POS is quoted separately, only if they want it. Say: "Ads money, the creators and payment fees are paid by you directly. Our fee is separate and fixed." If ₱14,000 feels heavy, the rule we use is that our monthly fee should stay under about 1.5 to 2% of their monthly sales; offer Tanaw or Suki first.

Why a monthly fee and not one payment? Hosting, updates, backups, review replies, the monthly report and support cost us every month. The monthly fee is what keeps the system running and improving. The setup fee covers the build.

Can we start with just one part? Yes. Most restaurants start with the website and the review cards, because they are cheap and show results within weeks. The POS and payroll can come later.

How long until everything is running? Google profile, review stands, your own domain and the first ads: the first two weeks. The events board, stamp card and feedback, the staff clock (before the December payroll) and bilao pre-orders by QR: within 90 days. The POS, stock, owner dashboard and online pickup orders: by month 6, one kitchen at a time, after the staff use each step daily. Lucia's: by month 12. Most of it is already built for Mogoba, so we are extending, not starting from zero.

Is there a contract? Can we stop? A simple agreement, month to month after an initial period of three months. If you stop, you keep your domain, your Google profile, your Facebook page and an export of your data. Nothing is held hostage.

Who owns the website, the domain and the data? You do. The domain is registered in Juval's name. The Google Business Profile and the Facebook page stay owned by you; we are added as managers and you can remove us any time.

When will we see results? Reviews and Google profile improvements: within the first month. Online orders: after the ordering page is live and promoted, usually within one to two months. POS savings show in the first full month of stock and sales reports.

Can you guarantee more customers or a top spot on Google? No one honest can guarantee a ranking or a number of guests. We commit to the work (reviews, replies, ads, content, reports) and we show the numbers every month so you can judge.

Website and online orders

We already have Facebook. Why a website? Facebook is where people find you; the website is where they decide. It shows the full menu of all three kitchens, opening hours and directions, and Google reads it, which helps you appear in searches. Facebook posts get buried; the website does not.

Can we have our own name instead of ivnautomation.xyz? Yes, for example juvals.ph or juvals.com.ph. About ₱2,500 to ₱2,900 a year for .ph or .com.ph, or under ₱1,000 for a .com. It is registered in your name.

Can we change prices and the menu ourselves? Yes. Once the POS is in, the website menu updates from the same menu. Before that, send us a message and we update it the same day.

Why not just use Foodpanda or GrabFood? GrabFood does not operate anywhere in Cagayan Valley, and Foodpanda's Aparri page lists a single restaurant; whether its riders reach Dacal la Fugu is untested. Their commission is commonly estimated at 25 to 30% per order (not published officially). On a ₱1,500 family order that is about ₱375 to ₱450; a business QR payment costs about ₱15. With your own ordering, the guest pays you directly and you keep the full price. You can still use the apps; this is an extra channel you own.

How do online payments work? Do we need a business account? Guests scan your GCash or Maya QR, pay the exact amount and enter the reference number. Staff check the money in the GCash or Maya app before cooking. Personal accounts work to start; for a cleaner setup, Maya Business and GCash for Business both list QR payments at about 1.0% (₱10 on ₱1,000). They need DTI and BIR Form 2303 registration, and GCash for Business also wants a fully verified GCash account at least 12 months old.

What about fake GCash screenshots? We never trust the screenshot. Staff type the amount they see in the GCash or Maya app; a reference number can only be used once; a reused screenshot is flagged; underpaid orders cannot be accepted. Big orders need a manager PIN. This is already built in the Mogoba system; I can show it.

Who delivers? Your own rider for nearby towns, or a courier such as Lalamove or a local rider group where available. We set delivery areas and a fee per area. Pickup works from day one.

Can we ask for a deposit for parties and big bilao orders? Yes, and Manila restaurants do it to stop no-shows. Written on the form: for example 50% down for hall bookings and large bilao orders, with a 48-hour cancellation window. Paid by QR and checked in the app. Never for ordinary tables.

Do senior and PWD discounts apply to online orders? Yes. A 2022 joint circular extends the 20% and VAT exemption to online, phone and SMS orders. The guest declares it when ordering and shows the ID at pickup or in chat. We record the name and ID number only, never a photo of the ID.

Does the website say who we are? Yes, and it must: the Internet Transactions Act asks online sellers to show the registered business name, address and contact, and clear prices and refund rules. We put these in the footer and on the order page.

Google reviews and NFC cards

What is NFC? Will it work on every phone? It is the same tap used for contactless cards. Most Android phones and iPhones from the last several years read it without an app. Every card and stand also has a QR code for phones that do not tap. iPhone XS and newer read it with no app (a banner appears to tap). On Android, NFC must be switched on and many budget models sold here have no NFC at all.

Is it allowed to ask for reviews? Yes. Google allows asking every guest. What it does not allow is paying or giving freebies for reviews, or only asking happy guests. We ask everyone, the same way.

Can we delete bad reviews? Only reviews that break Google's rules (spam, offensive, fake) can be reported for removal. For honest bad reviews, a calm, quick reply does more good than the removal would: people read the replies.

Can we give a free lemonade or a discount for a review? No, not even for any review regardless of stars. Google bans incentives; the penalty can block new reviews, hide existing ones, or put a public warning on the profile.

Can our family and staff post reviews to get us started? No. Reviews from owners, staff, relatives or former employees are a conflict of interest and the

most common thing Google's filters remove. Google removed 292 million reviews in 2025.

Should Don Jose and Rosalina have their own Google pages? Not now. Google wants one profile per business; separate ones only for parts that run as distinct businesses with their own counter and signage. List all three kitchens on the Juval's profile. Lucia's, being a separate place, gets its own profile.

Why not get many reviews at one big event? Sudden bursts look like manipulation to Google. A steady flow every week ranks better and is safer.

Why does each server get a card? So you can see who is asking guests to review. Reward the asking (most reviews collected), never the star rating, and never pay guests.

How much do the cards and stands cost? Cheap. An NFC review card costs around ₱140 online, NFC stickers about ₱10 each, and a locally printed acrylic table stand about ₱100 to ₱250. For 20 tables, two counter stands and six server cards: roughly ₱3,500 to ₱7,500 one time. We write and lock each chip so nobody can change where it points.

How many reviews can we expect? Our base case, if staff offer the card at every bill: about 15 new reviews a month, so about 72 by month 3, 117 by month 6 and 207 by month 12, assuming around 100 guests a day. If new reviews average about 4.4 at first and 4.6 later, the rating reaches about 4.3 by month 6 and 4.5 by month 12. These are estimates; we measure from week one. It depends on how consistently the staff ask.

Ads and content

How much should we spend on ads? Three levels, paid by you directly, with the 12% VAT included: ₱5,600 a month always on (₱5,000 of Facebook ads), about ₱16,560 in growth months (₱13,000 of ads plus one local creator) and

about ₱38,720 only in peak months like December, Holy Week and fiesta season (Facebook, a few days of TikTok and two creators). You pay Meta and TikTok from your own card. We set up, run and report. Start small, keep what works.

Can't we just boost posts ourselves? You can. The difference: we target only people within a short drive, use ads that open a Messenger chat to reserve or order, track which ads bring bookings, and stop the ones that do not.

Do we need TikTok? Not on day one. Short videos of the sizzling sisig and the garden work well on both TikTok and Facebook Reels, so we film once a month and post to both.

Is VAT added on ads? Yes. Since June 2025, 12% VAT applies to Facebook, Google and TikTok ad spend (RA 12023). The budgets we quote already include it.

Can we run a share-and-tag raffle? No. Facebook bans "share to enter" and "tag friends to enter", and raffles need a DTI sales promotion permit. Plain promos and good photos work better anyway.

Will the new Camalaniugan to Aparri bridge bring customers? Possibly. It opened in January 2026 and is reported to carry over 6,000 travellers a day. Whether that traffic passes Juval's we will see from a simple "how did you hear about us?" at the counter and a travellers ad set.

Should we hire a big agency instead? Not at this size. An agency retainer often costs more per month than the whole ad budget. The setup is a few days of work, then a monthly rhythm we run with you.

POS and the three kitchens

We already have a register. Why change? Your register prints a total. Hapag also sends each kitchen its own ticket, splits sales by Grill, Don Jose and Rosalina, counts stock as you sell, handles senior and PWD discounts the legal way, and shows you everything on your phone.

Is your POS BIR-accredited? Not yet. Today it runs the kitchen, stock and reports, and prints order slips marked "not an invoice". Your invoices still come from your registered booklets or machine. When you want Hapag to be your official invoicing machine, we apply for BIR accreditation as the developer (the application is free under RMO 24-2023) and register each terminal for a Permit to Use. Until it is registered, it prints order slips and you keep issuing your BIR-registered invoices exactly as you do now. We do not take risks with BIR.

What if the internet or power goes out? The POS works fully offline: sales, kitchen tickets and stock keep going, and everything syncs when the internet is back. For power, a small UPS or power bank keeps the tablet and printer running.

What hardware do we need? Can we use our own tablet? A Samsung Galaxy Tab A11 (about ₱8,000) for the counter, an 80 mm printer for the cashier, a heat-tolerant printer at the grill (about ₱8,000 to ₱11,000 for LAN models), small printers for the oven and the café (₱1,200 to ₱3,800), and a cash drawer (₱1,900 to ₱4,500). About ₱35,000 to ₱60,000 in all, bought at cost, compared with UTAK's ₱49,999 bundle. An Android tablet you already own can work if it is recent enough; we check it first.

Our staff are not techy. The register is big buttons and photos, the same as a phone app. Training is one or two sessions on site, and we come back during the first busy weekend.

How are senior and PWD discounts handled? The POS follows RA 9994 and RA 10754: 20% of the senior or PWD guest's share, VAT exemption when you are VAT-registered, name and ID number captured on the slip. The example on the POS slide: ₱1,410 bill, four guests, one senior. Her share is ₱352.50, so 20% is ₱70.50 off and the bill is ₱1,339.50 (non-VAT). If you are VAT-registered, the VAT comes off her share first ($\text{₱}352.50 / 1.12 = \text{₱}314.73$), then 20%, so ₱100.71 off.

Can staff steal by voiding orders? Voids, refunds and discounts need a manager PIN, and every one is logged with who did it and why. The drawer is counted blind at closing and the over or short is recorded.

Can we see sales when we are not there? Yes, on your phone, per kitchen and per branch, and a short message every morning with yesterday's numbers.

Why not just buy UTAK or StoreHub? They are proven, at about ₱1,500 to ₱4,500 a month plus ₱30,000 to ₱50,000 in hardware. Neither is built around three kitchens in one order with per-brand reports, and neither has support here in Cagayan. If BIR accreditation today is the deciding factor, StoreHub Starter is a fair choice, and we would still do your website, reviews and ads.

Do we need e-invoicing by December 2026? Probably not. Under RR 11-2025, POS users are in a later group and micro businesses (under ₱3M yearly sales) are exempt. Ask your accountant whether online orders put you in the e-commerce group.

Can one cashier sell all three brands on one bill? Yes. One bill under your registered business name, while the reports split sales by Grill, Don Jose and Rosalina.

Do we give the senior discount on a whole bilao or group bill? No, only on the senior's or PWD's own share. For bilao, online and phone orders the rule

uses the most expensive single meal with a drink as the base. The system works it out and logs the ID.

Can they get the senior discount on top of a promo? Not under current law. They get whichever is better. A bill to allow both is only pending.

If we add a service charge, who gets it? All of it goes to non-managerial staff, shared equally by hours worked, at least every two weeks (RA 11360). Hapag keeps it out of your sales and prints the split.

Printers or screens in the kitchen? Printers first: cheaper, handle heat, no training. A screen at the café counter later if you want drink timing.

Stock and food cost

Do we have to weigh everything? No. We start with the 20 to 30 dishes that sell most and their main ingredients. That already covers most of your food cost. Everything else can come later, or never.

Will it tell us when to buy? Yes. Each ingredient has a reorder level; the system lists what to buy, grouped by supplier, ready to send by Messenger.

Staff time and payroll

Do we need a fingerprint machine? No. Staff enter a 4-digit PIN on the counter tablet and it takes a quick photo, which stops buddy punching at no hardware cost. If you prefer tapping a card, we add a small USB card reader (under ₱1,000; the Galaxy Tab A11 has no NFC of its own) and ₱10 card stickers. Fingerprint machines are possible later, but PIN plus photo is usually enough.

Is taking photos or fingerprints legal? Yes, if staff are told in writing what is collected and why, it is kept only as long as needed, and it is protected. Only the manager sees the photos, they are deleted after the payroll dispute

window (we suggest 60 days), and we store no face templates and track no phones. We give you a short notice for staff to sign (Data Privacy Act).

What does one minimum-wage worker really cost us a month? About ₱16,100 for 26 days: ₱13,000 basic plus about ₱3,100 for SSS, PhilHealth, Pag-IBIG, 13th month and leave, before holiday premiums. The owner dashboard uses this loaded cost so labor % is honest.

What do we pay on Christmas and New Year's Eve? Dec 25 and Dec 30 are regular holidays: 200% if worked, 100% if not (if they worked or were on leave the day before). Dec 24 and Dec 31 are special days: 130% if worked, no pay if not unless your policy pays. The 13th month is due by 24 December.

Can we deduct shortages or broken plates? Only within the Labor Code limits and with the worker's written consent. Treat cash advances as signed loans. Hapag never auto-deducts a drawer shortage.

A new wage order is coming in November. Does the system handle it? Yes. The daily rate is a setting with an effective date, so a cutoff that spans the change pays the old rate before and the new rate after.

Why not Sprout, PayrollHero or Jibble? You can use them. Sprout Payroll Starter is about ₱15,000 a month on a one-year contract; PayrollHero about ₱7,500 a month for 20 staff; Jibble has a free clock-in. None of them sees each kitchen's sales, so none can show labor % per kitchen, and ours works offline.

Does it compute the full payroll? It prepares it: hours, overtime, night shift, holidays, and the SSS, PhilHealth and Pag-IBIG lines, using the Region II rates: ₱500 a day minimum under Wage Order RTWPB 2-24 (since 5 November 2025), overtime +25%, night shift (10pm to 6am) +10%, regular holiday 200%, special day and rest day +30%. A shop with 10 or fewer workers pays less only if the wage board actually approved an exemption.

You or your bookkeeper review and approve. We do not file government reports for you.

Loyalty, feedback and events

Do guests need to download an app? No. The mobile number is the stamp card. The cashier types it in.

Can we text our guests about promos? Only those who agreed to receive messages. We ask for consent when we take the number, and anyone can stop the messages any time.

How do you handle unhappy guests? After the visit, a short "How was it?" message. If a guest is unhappy, the manager gets a message right away to call them. Everyone still sees the Google review link; we never block anyone from reviewing.

How does the stamp card work? Won't free items eat our margin? One stamp per ₱300 paid, across Juval's Grill, Don Jose, Rosalina and Lucia's. Ten stamps (₱3,000 spent) earns a pizza or a small pancit bilao; a free Rosalina drink at five stamps is the early win. The reward's food cost is about 4.5% of what that guest already spent, and only regulars reach it. Stamps are earned on the amount actually paid, never stack on a senior or PWD discounted item, and manual stamps need a manager PIN so staff cannot stamp their own number.

Do we do something for birthdays? A free drink or dessert with any dine-in meal in the birthday week, for members who joined at least a week before. We keep only the birthday month, not the full date. The birthday message also invites them to hold the party here, which is where many event bookings come from.

Do we need to register with the National Privacy Commission? Probably not at your size: registration starts at 250 employees or sensitive data on

1,000 or more people. Senior and PWD ID numbers count as sensitive, so Hapag stores only what BIR requires, masks ID numbers on screen and keeps no ID photos. You still need a privacy notice at the counter and one named person responsible. Your accountant or the NPC can confirm.

How do we stop double-booking the hall? One events board instead of many Messenger threads. A date is held for 3 days and is only confirmed when the deposit is recorded; the calendar blocks a second booking on that date.

How much deposit should we ask? We suggest 50% to confirm, the final headcount 3 days before, and the balance on the day. That is common practice, but you set the policy. Deposits go to the business QR and are recorded against the event, never to a personal GCash.

What will all this earn us? We cannot promise a number. Studies of independent restaurants show about 5 to 9% more revenue per extra star (US data, so treat it as a direction). If Juval's sells around ₱840,000 a month, a 0.3 star rise would be roughly ₱12,600 to ₱22,700 a month. One extra event or two extra bilao orders a month already covers the smaller packages. We measure returning-guest share, reviews and rating, and events booked, and show you every month.

What would we look at every day? One morning message: yesterday by kitchen against the same day last week, regulars returning, reviews waiting for a reply, events this week. Food cost and labor once a week.

Lucia's

Can this also run Lucia's? Yes. Same system, two branches: separate menus, stock and staff, separate or combined reports. The owner switches between Juval's, Lucia's or both on the phone. Guests can collect stamps at both if the privacy notice says so. Staff who work at both have each shift

tagged by branch, so labor lands on the right business; whether the two count as one employer is a question for your accountant.

About us

Who is IVNautomation? What if you disappear? A small web development and automation team in Cagayan. You own your domain, pages, data and backups; the POS keeps working offline on your own tablet; and you can export everything any time. If we ever stop, another developer can take over.

Can we see it working? Yes. The website is live now. The POS and online ordering are built for Mogoba Korean Food House in Aparri and ready to demo; I can show it right here. Be honest if asked: Mogoba is not using it day to day yet, it is at the demo stage.

What do you need from us to start? Manager access to your Facebook page and Google Business Profile, the latest menu and prices, a few hours with the cooks to set up recipes, the staff list, and someone at the restaurant who will be our contact.

Is this AI? It is automation that saves your time. Some features, like suggesting replies to reviews, use AI, but you approve everything before it goes out.

Why call it Hapag? Because a restaurant runs around the table. Hapag puts every guest, order, peso and hour worked on one table.

6. If they say ...

THEY SAY	YOU SAY
"It is too expensive."	"Let's start with the part that pays for itself first: reviews and the Google profile. Then decide on the rest once you see the numbers."
"We will think about it."	"Of course. What would you need to see to decide? Can I come back on [date] with the answer?"
"We are fine with Facebook."	"Facebook is where they find you. The website and Google are where they decide. Let's measure for a month and see."
"Our staff will not use it."	"That is why we train on site and come back on your first busy weekend. The screens are big buttons with photos."
"Someone else offered cheaper."	"Compare what is included: three kitchens, stock, offline, staff time, and support here in Cagayan. Happy to go through their list with you."
"What if it breaks on a Sunday?"	"It works offline, so sales never stop. Message me and I answer the same day."

7. Things not to say or promise

- No guaranteed ranking, review count or sales increase.
- No claim that the POS is BIR-accredited until it is registered.
- No paying or rewarding guests for reviews, no "only ask happy guests".
- No texting guests who did not agree to receive messages.

- No prices in the Messenger message or the PDF. Prices only in person, as starting points.
- No claim that Mogoba uses the POS every day. It is built and demo-ready; say exactly that.
- No promise that Foodpanda or GrabFood will come; GrabFood is not in Cagayan at all.

8. Numbers cheat sheet

NUMBER	WHAT IT MEANS	SOURCE
4.1 from 27	Juval's on Google when we wrote the deck. Recheck the morning of the meeting.	Google Maps
31% (17% a year before)	People who only use businesses rated 4.5 stars or more (US survey, 2026)	BrightLocal
47%	Will not use a business with fewer than 20 reviews	BrightLocal, same survey
74%	Look for reviews from the last 3 months	BrightLocal, same survey
5 to 9%	More revenue for each extra star, independent restaurants (US Yelp data)	Harvard Magazine on Luca
12% more reviews, +0.12 stars	What happened when businesses started replying to reviews (hotels)	INFORMS

NUMBER	WHAT IT MEANS	SOURCE

NUMBER	WHAT IT MEANS	SOURCE
24 December	13th month pay deadline	PD 851

The full briefs with every source are in `RESEARCH.md` ; the business blueprint is `HAPAG.md` .

9. After the meeting

- Same day: thank-you message on Messenger, with the answers to anything you promised to check.
- Write down their answers to the discovery questions in `juvals/notes/` (create it).
- If they agree to start: collect access to Facebook and Google, the menu, the staff list.
